

# Hassan I

MSc Data Science - University of Roehampton | Game Developer | 4+ Years | Unity Game Developer  
London, United Kingdom | 07777806493 | hassaniftikhar6012@gmail.com | [Linkedin](#)

## PROFESSIONAL SUMMARY

---

Unity Game Developer with 4+ years experience shipping real-time multiplayer titles across PC, mobile, and Nintendo Switch. Expertise in gameplay systems, AI, networking (Photon), and performance optimisation. Proven track record contributing to production-ready titles and supporting console porting and platform compliance for certification.

## RELEVANT SKILLS

---

- **Functional Competencies:** End-to-end Unity game development, scalable gameplay systems design, multiplayer networking architecture, cross-platform console/mobile deployment, and production-grade performance optimization.
- **Technical Tools:**
  - **Project Management & Collaboration:** GitHub, Plastic, Jira, Asana
  - **Gameplay Systems:** AI Implementation, Physics, Animation, Input Systems.
  - **Technologies:** Unity(2D & 3D), C#, Photon (PUN/Bolt), PlayFab, Unity Profiler.
  - **Platforms:** PC, Mobile(Android/iOS), VR, Nintendo Switch

## WORK EXPERIENCE

---

### Game Engineer, RIFT Games

Jul 2023 - Sep 2024

Lahore, Pakistan

- Led engineering delivery across 2 cross-platform titles, overseeing full feature lifecycles from technical design to production release.
- Reduced feature integration time by 25% by architecting reusable gameplay frameworks and modular system design.
- Improved sprint predictability by 20% through proactive technical planning and risk assessment during Agile cycles.
- Mentored 3+ junior engineers, conducting structured code reviews and enforcing clean architecture principles.
- Collaborated with multidisciplinary teams of 10+ members, ensuring milestone delivery within scope and timeline constraints.

### Game Engineer, FRAG Games

Oct 2020 - Jul 2023

Lahore, Pakistan

- Contributed to development of a multiplayer console title, supporting gameplay systems and live feature updates.
- Accelerated build deployment cycles by 15% by refining version control workflows and integration processes.
- Supported cross-platform certification preparation, ensuring compliance with Nintendo Switch technical requirements.
- Partnered with designers and QA to translate gameplay specifications into scalable technical implementations.

## OTHER WORK EXPERIENCES

---

- **Unity Game Developer (Freelance):** Designed and delivered card-based games for USA-based clients, managing end-to-end development from gameplay systems to final deployment (**Fiverr, 2021–Present**).

## EDUCATION

---

### MSc Data Science, University of Roehampton

2024 - 2025

London, United Kingdom

Highlights:

- Bridged Data Science and Game Development by building BlindPlayVR, a research-driven VR project focused on accessibility and user experience optimisation.

- Developed data visualization and analytical models to support decision-making in interactive systems.

## **BSc Computer Science, Information Technology University**

2016 - 2020

Lahore, Pakistan

### **Highlights:**

- Built strong foundations in Object-Oriented Programming, Data Structures, and Algorithms, applying them to design efficient game mechanics, player interaction systems, and optimized performance logic in game development projects.
- Studied Artificial Intelligence and Databases, enabling the implementation of intelligent NPC behavior, decision-making systems, and structured data management for player progress, game states, and analytics.

## **RELEVANT PROJECT EXPERIENCE**

---

### **BlindPlayVR (VR) | [Link](#)**

University of Roehampton

- Developed a VR shooter designed specifically for blind and visually impaired players using 3D spatial audio and haptic feedback
- Implemented sound-based navigation and combat mechanics, eliminating reliance on visual cues
- Conducted usability testing to refine gameplay balance and adaptive difficulty
- Integrated Meta Quest hand and head tracking for immersive, accessible interaction

### **Food Fight (PC, Nintendo Switch) | [Link](#)**

FRAG Games

- AI implementation for enemy behaviours and combat logic using Navmesh Agent
- Developed real-time multiplayer systems using Photon Bolt, improving latency by 18%
- Enhanced input responsiveness by 35% using Unity's New Input System
- Ported and optimised the game for Nintendo Switch, maintaining stable 60 FPS.

### **Death Travelers (Android, iOS) | [Link](#)**

RIFT Games

- Base gameplay implementation including 30+ interconnected rooms
- Linked room systems with runner-mode gameplay loop
- Improved mobile performance by 30% by reducing load times and frame drops on low end devices.

### **Mythic Legions (PC)**

RIFT Games

- Implemented end-to-end UI and enemy behaviors for a PC-based simulation title using Unity ECS architecture
- Built in-game cutscenes and interactive tutorial flows to support player onboarding
- Engineered AI and gameplay mechanics, reducing CPU usage by 22% through optimised pathfinding.

## **COURSES & CERTIFICATIONS**

---

- Web Engineering with PHP, Punjab University Lahore, Sep 2017
- Unity 3D Workshop, Information Technology University, Nov 2016

## **KEY AWARDS & RECOGNITIONS**

---

- **Early Bird Scholarship:** Top 20 finalist for Early Bird Scholarship at Information Technology University, Lahore (competitive interview-based selection).
